

# How open is your preprint?

The license you choose has a big impact on how your work will be shared & reused.

The Creative Commons (CC) licenses described here break down the barriers to sharing by communicating rights and permissions up front with everyone.

OPEN

CLOSED

## CC0 waiver

CC0 places work in the public domain, waiving all copyright and related rights.

Allows anyone to repost or reuse your preprint in any medium for any purpose, even without attributing it to you.

Often used for works created by U.S. government employees, as these are already in the public domain in the U.S.

Ideal for datasets.<sup>3</sup>

## CC BY

### Attribution (BY)

Allows anyone to repost or modify your preprint in any medium for any purpose, but requires that users provide attribution to you and include a link back to the original whenever the material is used and shared.

Encouraged by NIH.<sup>1</sup>

Fits the original definition of open access.<sup>2</sup>

## -NC,-ND,-SA

These terms can be added to the CC BY license to produce 5 other licenses

<https://creativecommons.org/licenses/>

### Noncommercial (NC)

Prohibits commercial use of the material.

If you select it, you *don't* grant permission to:

- Republish a figure in a paywalled journal
- Use the preprint to advertise products
- Reprint the work in a textbook sold commercially

### No derivatives (ND)

Prohibits the sharing of adaptations of the material.

If you select it, you *don't* grant permission to:

- Translate the preprint to another language
- Create a copy of the preprint with extensive annotations
- Adapt a diagram or drawing for use in another paper

### ShareAlike (SA)

Requires adaptations of the material to be released under the same license.

For example, a figure that is modified from your preprint would have to *also* be published under a CC BY-SA license. (However, a book containing that modified figure could have its own, more restrictive license).

This license is used by Wikipedia and Wikimedia Commons.

## No license

All rights reserved

If you do not select a license, you do not give default permission to reuse the work (beyond what is required to post to the preprint server).

As a result, you *don't* grant permission to:

- Repost your paper, unchanged, on a class website

Using a figure in academic talks or text & data mining may also be prohibited in countries without a fair use or equivalent doctrine. Note that some servers (bioRxiv, arXiv, etc) allow TDM for all manuscripts.

## Remember...

- All CC licenses require reusers to indicate if changes have been made, which alerts others that the work as modified is not the same as the original.
- As long as you retain the copyright in your work, you can always grant additional permissions on an individual basis. This includes giving permission for someone to reproduce or modify your work, commercialize your work, or transferring copyright to a journal or signing a license to publish agreement.
- Licenses are permanent, but don't stop authors from releasing other versions under other licenses.
- Professional norms for citation and plagiarism apply regardless of how content is licensed, and even for works dedicated to the public domain under CC0. Often, those norms are more restrictive than the attribution requirements of CC licenses.
- Fair use and other limitations and exceptions apply regardless of which license is selected.
